Features :

1. The equipment is suitable for sterile injection filling /plug.
2. The contact surface between rotating pump/ filling and injection is made by SUS316L.
3. We adopt the design of automatic removal and dyestripping.
After removing, we use VHP to sterilize and adopt aseptic process within complete process.
4. Use servo motor to precisely control auto-shift, positioning, filling and plug operations for high product yield.
5. The machine owns the function that is lack of material, ectopic detection and retraction but doesn't appear the trickle-down phenomenon.
6. The range of filling: 1ml – 5ml
7. There are 100 syringes of NEST, and the filling time is 6 min.
8. We adopt Teflon and Silicone Tube and conform to pharmaceutical safety specification.
9. we conform the 100 class A grade cleanliness

為什麼要用預充式注射器：

預填充注射器為患者、醫療護理人員和製藥廠商提供了許多優勢。

安全 – 減少針刺的風險傷害、觸摸污染和交叉感染
簡單 – 易於使用，最少的管理步驟。

安全性 – 精確的高劑量和密封度，可以支持系統的完整性。

對於製藥和生物技術公司，預充式註射器增強：

節省 – 優化的API使用，減少過量填充，減少材料需求，並減少藥物浪費在臨床試驗(vs小瓶)

簡單 – 簡單的存儲和處理

差異化 – 在市場上的瓶子競爭優勢

Why a prefilled syringe?

Prefilled syringes offer many advantages to patients, health care professionals, and pharma manufacturers. For patients and health care professionals, prefilled syringes provide :

Safety – reduced risk of needle stick injuries, touch contamination, and cross-infectionn.

Simplicity – easy to use with minimal administration steps.

Security – high dosage accuracy and possible usage of tamper-evident closures, which can support integrity of the system.

And for pharma and biotech companies, prefilled syringes enhance :

Savings – optimized API use with less overfill, reduced material requirements, and less drug waste in clinical trials (vs vials).

Simplicity – simple storage and disposal.

Differentiation – competitive advantage over vials in the marketplace.
